

1. **Before you start revising, get all your notes sorted, and draw up a list of all the topics you need to cover.** This serves two purposes: you will definitely cover everything you need to cover, and a bit of tidying and sorting out is a nice relaxing way to ease yourself into the revision process.
2. **Plan exactly when you are going to revise, and be strict with yourself.** Don't just wake up one Saturday and say that you are going to be revising all day, because you probably won't get a lot done. Say that you will work from 10 until 11, then take a half hour break, then work until 12.30, then have some nice lunch, then do another hour, then go for a walk, and so on. If you are only revising in small chunks, and if you know the next break is just around the corner, your revision is likely to be much more focused and effective.
3. **Give yourself little treats and things to look forward to.** If you do a good day of revision, take the night off, watch some telly, go and see your friends, put all thoughts of maths and school to the back of your mind. Buy yourself some chocolate, but only let yourself eat it once you have achieved what you need to do.
4. **Don't just read through the textbook!** The only way to revise maths is to do maths. You will do much better spending 20 minutes doing maths questions than spending two hours just reading a textbook. The more questions you do yourself, the more you will get right, the higher your confidence will be, the more you will enjoy your revision, and the better you will do in the exam.
5. **Use the internet.** The internet is like having your own personal teacher who is available for you whenever you like. Especially good are www.montymaths.co.uk, www.methodmaths.com, www.mymaths.co.uk, and www.corbettmaths.com. But there's lots of others out there – find out what works best for you.
6. **Don't just practice the topics you can do.** If you are really good at fractions, for example, it is very tempting to keep doing lots of fractions questions and then smiling as you keep getting them right. But unfortunately the exam is probably not going to have more than one or two fractions questions. Although it can be painful, work your way through the topics that you struggle with, because it is much better to struggle on them at home, when you have time on your side and the answers available, than it is to struggle in the exam.
7. **Practice doing questions under exam conditions.** Get someone to pick you a set of questions from your textbook, or get some from a maths website, and try doing them in silence, with no help, for a fixed amount of time. This will get you used to what it will be like in the exam, how fast you need to go, and is the best way of checking that you really understand a topic.
8. **Practice using your calculator!** Many people seem to assume that any question that lets you use a calculator is easy, and all calculators work the same. Those people are wrong on both counts. All calculators work differently, and unless you have used yours for lots of different types of questions (trigonometry, Pythagoras' Theorem, negative numbers, indices), you might come unstuck in the exam. Find out if there are any problems early enough to correct them!
9. **If it works for you, try revising with a friend for a bit of the time.** You will find that one of you understands one topic more, whilst the other is a bit of an expert on another. Just by explaining things to a friend, you will find that your understanding increases, and likewise you might learn a different way of thinking about and understanding a topic.
10. **Use your analysis grids.** These are the sheets your teacher gives you after the mock exams. They're great as they tell you EXACTLY what you need to work on.

GOOD LUCK!
